DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. **Claims 1, 3, 23, and 24** are rejected under 35 U.S.C. 102(e) as being anticipated by Northern Telecom Limited (EP 0923221), hereinafter referenced as Nortel.

Regard **claim 1**, Nortel discloses a communications signal splitter and filter. In addition, Nortel discloses a filter for filtering signals in a telecommunications system and for impedance matching to a predetermined complex impedance, wherein the filter has at least on first pass band, and wherein the filter is passive, and the characteristic impedance of the filter is complex so that it matches the predetermined complex impedance at least approximately, and wherein a resistance of at least one of the filter components is chosen such that the resistance assists in giving the characteristic impedance of the filter its complex character, as disclosed at column 2, line 55 through column 3, line 26 and column 7, line 53 through column 8, line 20.

Regarding **claim 3**, Nortel discloses everything claimed as applied above (see claim 1), in addition Nortel discloses wherein the resistance is in series with at least one inductance, the resistance and the inductance assisting in giving the filter the complex

characteristic impedance, as disclosed at column 2, line 55 through column 3, line 26 and column 7, line 53 through column 8, line 20.

Regarding **claims 23 and 24**, they are interpreted and thus rejected for the reasons set forth above in the rejection of claims 1 and 3.

Allowable Subject Matter

2. **Claims 19-22** are allowed.

3. **Claims 4-18 and 25-29** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed February 8, 2006 have been fully considered but they are not persuasive. Specifically, regarding the passive filter the examiner respectfully disagrees, since the above cited rejection more than adequately meets the claim limitation. Further, regarding the resistor and the complex characteristic the examiner respectfully disagrees since the above cite reference more than adequately meets the claim limitations.
